Top 50 MicroStation Commands

1. ACCUDRAW - Opens the AccuDraw dialog box to aid in precision drawing.
2. ALIGN - Aligns two or more elements with respect to a reference point.
3. ANNOTATE - Opens the text editor to create, edit or modify text.
4. ARC - Creates an arc element.
5. ARRAY - Creates a rectangular or polar array of elements.
6. ATTACH - Attaches a reference file to the current file.
7. BACKGROUND - Sets the background color of the view window.
8. BOUNDARY - Creates a closed element from a series of connected elements.
9. CELL - Inserts a cell (a group of elements) into the drawing.
10. CHAMFER - Creates a chamfer between two straight lines.
11. CHANGE LEVEL - Changes the level of selected elements.
12. CIRCLE - Creates a circle element.
13. CLIP - Clips an element to a boundary element or view window.
14. COLOR - Sets the color of selected elements.
15. COPY - Copies selected elements.
16. CUT - Cuts selected elements.
17. DELETE - Deletes selected elements.
18. DIMENSION - Creates a dimension element.
19. DIVIDE - Divides a line or curve into equal segments.
20. ELLIPSE - Creates an ellipse element.
21. ENDPOINT - Snaps to the endpoint of a line or curve.
22. EXTRACT - Extracts a portion of an element into a new element.
23. FENCE - Selects elements inside a fence boundary.
24. FILLET - Creates a rounded corner between two lines or curves.
25. HIDE - Hides selected elements.
26. LEVEL - Creates a new level or modifies an existing one.
27. LINE - Creates a line element.
28. MATCH - Matches the properties of selected elements to a reference element.
29. MEASURE - Measures the distance and angle between two points.
30. MERGE - Merges two or more elements into a single element.
31. MIRROR - Mirrors selected elements.
32. MOVE - Moves selected elements.
33. OFFSET - Creates a parallel line or curve offset from a reference line or curve.
34. ORTHO - Restricts cursor movement to the horizontal and vertical axes.
35. PLACE NOTE - Places a note on the drawing.
36. POINT - Creates a point element.
37. POLYGON - Creates a polygon element.
38. PRINT - Prints the drawing to a printer or plotter.
39. PROPERTIES - Displays or modifies the properties of selected elements.
40. PULL - Extrudes a 2D element to create a 3D solid.
41. REDO - Redoes the previous undo operation.
42. REFEDIT - Edits a reference file directly in the current file.

43. ROTATE - Rotates selected elements around a reference point.
44. SCALE - Scales selected elements.
45. SELECT - Selects elements for modification or manipulation.
46. SNAP - Snaps the cursor to a specified distance or angle.
47. SPLINE - Creates a spline element.
48. TEXT - Creates a text element.
49. UNDO - Undoes the previous operation.
50. VIEW - Sets or modifies the view window parameters.
